*Your Design. Your Ceiling.
Your Imagination.*

STRETCHÉ™ WHITE LIGHTING SYSTEMS

Four Levels of Lighting Control for Every Space & Experience

TYPE 1 — STATIC WHITE

Fixed CCT LED System

This configuration uses a single fixed color-temperature LED, such as 3000K, 4000K, 6000K or 10000K, depending on the desired visual effect.

The ceiling remains consistently illuminated at the selected white-light temperature.

Best for: ceilings, offices, retail spaces, corridors and projects where simple, consistent illumination is required.

CCT OPTIONS

Control:
ON / OFF

CCT:
Fixed

Color Changing:
No

Dynamic Effects:
No

TYPE 2 — TUNABLE WHITE

Dimmable + Tunable CCT LED System

Type 2 provides control over both brightness and white-light temperature. The ambience can be adjusted from warmer to cooler white according to the application, time of day or desired mood, within the specifications of the selected LED system.

For example, a translucent ceiling can have a warmer appearance in the evening and a brighter, cooler daylight appearance during the day.

Best for: homes, offices, hotels, healthcare, retail spaces and places where light needs to adapt to different needs.

Control:
Dimming +
CCT Adjustment

Brightness:
Adjustable

White Temperature:
Adjustable

RGB Colors:
No

Dynamic Effects:
No

TYPE 3 — RGBW

Dimmable + Tunable White + Color-Changing System

Type 3 integrates RGBW LED technology, providing white illumination along with a wide range of colored lighting effects.

Users can control brightness, supported white-light settings and RGB colors, allowing the same printed ceiling to create different moods and visual environments.

For example, a printed sky ceiling can appear as natural daylight and later transition into blue, sunset-inspired or other decorative color scenes.

Best for: restaurants, lounges, hotels, entertainment spaces, showrooms and creative environments.

Control:
Dimming + White Light +
RGB Color Control

Brightness:
Adjustable

Color Changing:
Yes

Preset Scenes:
Yes

Dynamic Capability:
Basic transitions/
effects, depending
on controller

TYPE 4 — DYNAMIC PIXEL

RGBW Pixel + DMX / MADRIX Programmable System

This is the most advanced STRETCHÉ™ WHITE lighting configuration. Individually addressable RGBW pixel LEDs can be controlled through technologies such as DMX and compatible pixel-control/software platforms such as MADRIX, allowing different areas or pixels behind the printed membrane to operate independently.

Instead of simply changing the entire ceiling to one color, lighting can be programmed to move across the ceiling.

This makes effects such as moving clouds, sunrise/sunset sequences, flowing light, waves, gradients, chasing effects and other animated scenes possible when the printed artwork, LED layout and programming are designed together.

Best for: theaters, theme environments, large venues, experiential spaces, hospitality, and signature architectural projects.

Control:
Advanced Digital /
DMX / Pixel Control

STRETCHÉ™ **PRINT**

Customized Printed Stretch Ceiling by NOOH

Your Design. Your Ceiling. Your Imagination.

STRETCHÉ™ PRINT

Customized Printed Stretch Ceiling by NOOH

Your Design. Your Ceiling. Your Imagination.

STRETCHÉ™ PRINT is a fully customizable architectural stretch ceiling system that allows customers, architects and interior designers to transform virtually any suitable high-resolution artwork, pattern or visual concept into a large-format decorative ceiling.

With our **up to 5-meter wide UV printing** capability, customized graphics can be produced for large ceiling applications, helping create expansive visual surfaces with reduced need for unnecessary print segmentation, subject to project dimensions and material specifications.

Customers can choose from concepts such as

Sky & Clouds

Nature

Abstract Art

Geometric Patterns

Marble Effects

Floral Artwork

Kids' Themes

Corporate Graphics

Hospitality Concepts

Your Own Design

The printed surface can then be combined with different backlighting technologies. Based on the lighting and control system selected,

FEATURES & BENEFITS

- ✓ **Fully Customizable** – Any high-resolution image, pattern or artwork
- ✓ **Up to 5-meter Wide Print** – Ideal for large-scale ceiling applications
- ✓ **Vibrant & Long-Lasting Prints** – UV printed for sharp detail & durability
- ✓ **Seamless Appearance** – Less segmentation, smoother visual impact
- ✓ **Compatible with Backlighting** – Enhance ambiance with chosen lighting systems
- ✓ **Smart Integration** – Works with various lighting & control solutions

STRETCHÉ™ PRINT

Customized Printed Stretch Ceiling by NOOH

Your Design. Your Ceiling. Your Imagination.

STRETCHÉ™ PRINT is a fully customizable architectural stretch ceiling system that allows you to transform any high-resolution artwork, pattern or visual concept into a stunning large-format decorative ceiling.

Sky & Clouds

Nature

Abstract Art

Geometric Patterns

Marble Effects

Floral Artwork

Kids' Themes

Corporate Graphics

Hospitality Concepts

Your Own Design

TYPE 1 — STATIC CCT

Fixed White Backlighting

STRETCHÉ™ PRINT Type 1 combines the customized printed ceiling with one selected fixed CCT LED lighting system.

Depending on the desired appearance, the project can be configured with a selected white-light temperature such as:

3000K

4000K

6000K

10000K

Once a CCT is selected, the ceiling is illuminated in that fixed white-light tone.

Features: Fixed CCT • Uniform Backlighting • Simple ON/OFF Operation • Cost-Effective Configuration

Ideal for: Printed sky ceilings, residential interiors, offices, retail stores, showrooms and projects where consistent illumination is required.

AVAILABLE CCT OPTIONS

3000K
Warm White

4000K
Neutral White

6000K
Cool White

10000K
Daylight White

TYPE 2 — TUNABLE WHITE

Dimmable + Tunable CCT Backlighting

STRETCHÉ™ PRINT Type 2 takes lighting control one step further by using a dimmable and tunable-white LED system behind the printed ceiling.

Instead of being limited to one fixed white-light temperature, the user can adjust the brightness and supported CCT range according to the desired ambience. The lighting can be controlled through a compatible remote control, mobile app or control system, depending on the selected hardware.

For example, the same printed sky ceiling can appear warmer and softer for a relaxed ambience or cooler and brighter for a daylight-inspired environment.

Features: Adjustable Brightness • Tunable White • CCT Control • Remote Control • App Control*

CONTROL OPTIONS

Remote Control

Mobile App

Wall Panel

TYPE 3 — RGBW

Color Changing + Dimmable + Tunable Lighting

STRETCHÉ™ PRINT Type 3 integrates an RGBW lighting system, dramatically expanding the creative possibilities of the printed ceiling.

Along with white-light control and dimming capabilities supported by the selected system, RGBW technology allows the ceiling to display a wide spectrum of colors. A single printed design can therefore create multiple moods and atmospheres.

A printed sky, for example, can transition from a natural daylight-inspired appearance to blue, warm sunset-inspired tones, decorative colors or customized lighting scenes. Compatible controllers can provide remote and/or app-based control for brightness, white-light settings, colors and preset scenes.

Features: RGBW Color Changing • Dimmable Lighting • White-Light Control* • Remote/App Control* • Preset Scenes • Multiple Ambience Options

ENDLESS COLORS ENDLESS MOODS

Preset Scenes

Relax

Sunset

Party

Ocean

TYPE 4 — DYNAMIC

RGBW + DMX / Programmable Dynamic Lighting

STRETCHÉ™ PRINT Type 4 is the most advanced configuration in the range, designed to transform a printed ceiling into a programmable visual lighting experience.

Using compatible addressable RGB/RGBW lighting, DMX/pixel controllers and programmable control software, different lighting zones or pixels can be controlled independently.

This allows programmed lighting sequences and illusions to move across or interact with the printed artwork.

For example, when combined with a specially designed cloud print and appropriate lighting layout, programming can create the visual impression of:

Moving Clouds

Flowing Light

Sunrise & Sunset

Color Waves

Dynamic Gradients

Chasing Light

Atmospheric Effects

Custom Scenes

Rather than simply illuminating the artwork from behind, Type 4 allows light, print and programming to work together as one experience.

Features: Programmable Lighting • RGB/RGBW Control • DMX/Pixel Control • Dynamic Effects • Custom Scenes • Motion-Based Lighting Illusions • Advanced Automation Integration*

PROGRAMMABLE CONTROL

DMX / Pixel Control

Software Programming

Zone / Pixel Mapping

Automation Integration*

TYPE 4 — Don't Just Light the Ceiling. *Bring It to Life.*

STRETCHÉ™ GLOSS

High-Gloss Reflective Stretch Ceiling by NOOH

Reflect More. Expand Space. Elevate Interiors.

STRETCHÉTM GLOSS

PREMIUM HIGH-GLOSS STRETCH CEILING SYSTEM

REFLECT. ELEVATE. TRANSFORM.

STRETCHÉTM GLOSS is a premium high-gloss stretch ceiling system designed to create a smooth, seamless and highly reflective ceiling surface. Its mirror-like visual character reflects light, furniture and architectural elements, creating an impressive sense of depth, height and spaciousness.

Unlike a conventional painted or gypsum ceiling, **STRETCHÉTM GLOSS** turns the ceiling itself into a prominent architectural feature. The reflective surface can make interiors appear visually larger, brighter and more luxurious.

THE BEAUTY OF REFLECTION

The signature feature of **STRETCHÉTM GLOSS** is its high-gloss finish.

Light from chandeliers, pendant lights, spotlights, decorative fixtures and surrounding interiors is reflected across the ceiling, adding another visual dimension to the space.

This makes it especially suitable for luxury residences, hotels, restaurants, lounges, retail stores, showrooms, salons, reception areas and premium commercial interiors.

HIGH-GLOSS MIRROR FINISH

Perfectly smooth & highly reflective surface

ENHANCES SPACE & HEIGHT

Creates the illusion of depth & spaciousness

REFLECTS LIGHT BEAUTIFULLY

Amplifies natural & artificial lighting

WATERPROOF & MOISTURE RESISTANT

Ideal for all interior environments

DURABLE & LONG-LASTING

Resistant to cracks, peeling & fading

QUICK & CLEAN INSTALLATION

Hassle-free with minimal disruption

VISUAL DEPTH EFFECT

One of the most exciting applications of **STRETCHÉTM GLOSS** is its ability to create a visual illusion of additional height.

For example, in a restaurant or hotel lobby, chandeliers and interior elements reflected on the glossy ceiling can create the perception of a much deeper and more dramatic space.

The ceiling doesn't just cover the room — it becomes part of the visual experience.

IDEAL FOR

Luxury Residences

Hotels

Restaurants & Lounges
